Decimal Point Selector Switch

– Used for designating the decimal point position (+ 0 2 3 4 F) for calculated results.

+ (Add-Mode) – Addition and subtraction functions are performed with an automatic 2-digit decimal. It is convenient for currency calculations.

F (Floating Decimal Point) – All effective numbers up to 12 digits are printed or displayed.

Rounding Switch

– Used for round-up [], round-off [5/4], or round-down [] to the pre-selected decimal digits in the result.

Grand Total / Tax Rate Set Switch

GRAND TOTAL

/ – When the calculations are performed with the GT switch set to "ON", the totals are accumulated in the grand total memory. Each time is pressed, the subtotal number is printed with the symbols G+. When is pressed, the intermediate grand total is printed with the symbols G<. Press successively to clear the grand total followed by the symbols G*.

TAX RATE SET

– Set switch to "TAX RATE SET" for setting or recalling the TAX rate.

Print / Item Count Switch

PRINT OFF

– Entries and results will appear on the display, but will not be printed out.

PRINT ON

– Entries and results will appear on the display and will be printed out.

ITEM

– Set switch to "ITEM" to count the number of times the , , and keys have been pressed. The item count will be printed on the left hand side of the paper roll (up to 999 times) when the , , or keys are pressed.

Important Functions to Remember

Clear Entry and Clear Key – Press once to clear last entered value. Press again to clear all entered values except memory. This key is also used for clearing the overflow error.

Equal Key – Used for obtaining multiplication and division results.

Non-Add/Subtotal Key – Used for printing out information which does not affect the calculation such as dates and serial numbers. Figure are printed on the left-hand side of the paper. It is also used for obtaining intermediate results.

Total Key – Used for obtaining addition and subtraction results.

Overflow

In the following cases, when "E" is displayed, a dotted line is printed, the keyboard is electronically locked, and further operation is impossible. Press to clear the overflow. The overflow occurs when:

1. The result or the memory content exceeds 12 digits to the left of the decimal point.
2. Dividing by "0".
3. The sequential operation speed is faster than the calculation processing speed. (Buffer Register Overflow)

■ Electromagnetic interference or electrostatic discharge may cause the display to malfunction or the memory, currency rate and tax rate to be lost or altered. Should this occur, use the tip of a ballpoint pen (or similar sharp object) to press the [RESET] button on the back of the calculator. After resetting be sure to set the calendar, clock, currency rate and tax rate again.
